

Setting up configurations for Mail Functionality

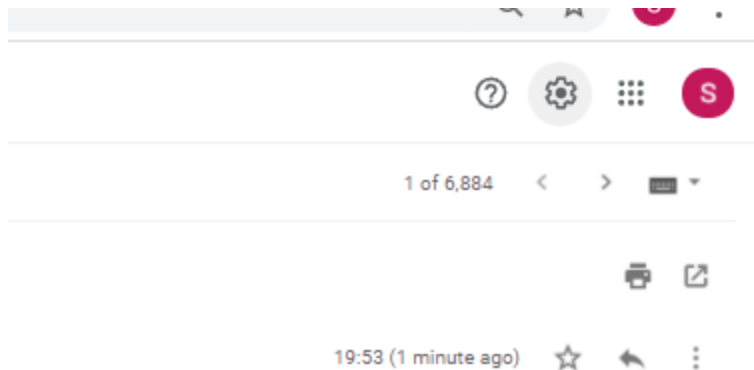

Requirement : We need a mail address to be configured in application from which we'll be sending the Booking details ,OTP and credentials to the users.

1. In the codebase , Go to
/airticketreservation/src/main/java/com/cts/airticketreservation/mail/SendEmail.java

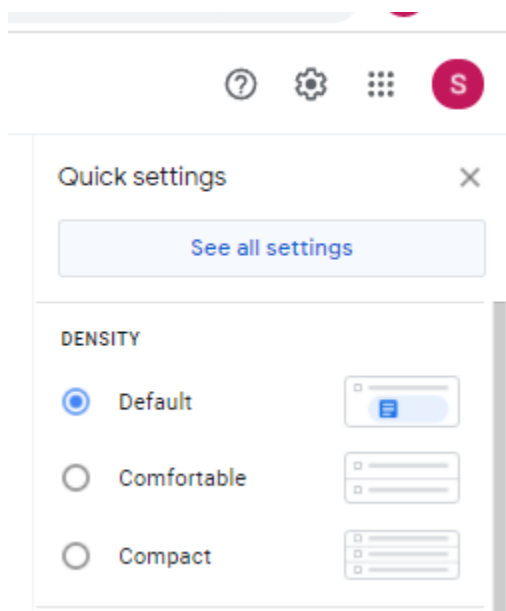

And update the username and password as per the gmail credentials you want to use for testing.

[This is a temporary setting that we need to do with senders gmail account for testing .](#)

2. Go to your gmail account and click on settings icon:

3. Click on See All Settings:

4. Go to Accounts and Report and select Other Google Account Settings

Settings

General Labels Inbox Accounts and Import Filters and blocked addresses Forwarding and POP/IMAP Add-ons Chat and Meet Advanced Offline Themes

Change account settings:

Less secure app access

Your account is vulnerable because you allow apps and devices that use less secure sign-in technology to access your account. To keep your account secure, Google will automatically turn this setting OFF if it's not being used.

! On

[Turn off access \(recommended\)](#)
